Supra Monaural

Supra Headsets: The introduction of the Supra over 10 years ago marked a major change in headset style. This light weight over-the-head headset brought a new level of comfort and fit to the headset industry. It offers sound to one ears and is worn headband style. Even with the introduction of many new headsets to the Plantronics headset line, Supras are still a favored choice in call centers and office environments.

It offers sound to two ears and noise canceling microphones. Even with the introduction of many new headsets to the Plantronics headset line, Supras are still a favored choice in call centers and office environments.

Encore Monaural

Encore Headsets: At last the ability to adjust the tone you hear. Encore is the first lightweight communication headset with the “Sound Enhancement System” tone control switch. For the first time you have instant control of how your callers sound. Not only can you adjust the volume, but also the tone. When we passed it around our office, some of our staff loved one setting, and some loved the setting that provides more bass tones. That’s the beauty of this new headset. Since we all don’t hear the same way, individual users can customize the sound to their needs and preferences. Slip on the best sounding, most comfortable headband headset yet. The Encore product embraces a new generation of headset technologies: human-factors engineering for near-universal fit, tone controls for sound enhancement, and featherweight design for all-day comfort. The headband and turret are click-stop positionable to maintain the right fit. Amplifier base required.

Headset Amplifiers

Modular Multi Purpose Amplifier

This Plantronics telephone Headset amplifier connector will work with most all telephones that have their handsets connected with a standard modular connector and do not have the dial in the handset(replacement and upgrade for M10). When you use this type of connector you will need to lift the handset to place and end calls. Order a CradleMate if you want to simplify placing and answering calls. See Accessories section.

Headset Switcher

This Plantronics headset amplifier lets you switch between your Telephone and any one of the following items: computer sound card, radio, tape or CD player & more! Listen to training tapes or music between calls. Many of our customers use them for voice recognition. Order a CradleMate if you want to simplify placing and answering calls. See Accessories section.

Prong Plug Headset Amplifier

This is a pj327 plug that is designed for telephones that are telephone headset ready. If you inspect your phone, and it has 1 or 2 sets of holes about 1/4" in diameter and about 3/4" apart this amp will most likely work for you. (We will call you if you order this item to check the phone you plan to use it on to assure compatibility. THIS IS NOT MODULAR.
